COS 135 Individual Assignment Week 1

Due: Monday 02/01/26 End of the day
This assignment has 3 sections: part #1, #2 and #3.
Note: Please attempt the Part #3 of this assignment after the week 2-1 lecture.

Part #1 (30pts) Complete Quiz #1 - Spring 2026 in the Brightspace week 2 folder.
Tip: review Week 1 → Getting started videos before attempting

Part #2 (20pts): Upload a photo showing your setup of the development environment.

We all set up our development environments (Ubuntu Operating System and the GCC compiler) for COS135. Please take a photo* of your display (you can use screen capture or your mobile phone to take a picture of your screen) showing the VirtualBox + Ubuntu environment and terminal output from the following commands. **Make sure your Ubuntu terminal is open, and the command prompt, following commands, and their outputs are clearly visible in the picture.**

uname -a

gcc --version

whoami

pwd

* Any common image format including .jpg, .png, etc.

Part #3 (50pts): submit your .c source code (create a single program to output all of the following**)**

Your development environment (Linux + gcc + VIM/nano/gedit) should be ready before completing this section.

Write your first Hello World program in C (covered in Week 2-1 material)

```c
#include <stdio.h>

int main()
{
    // printf() displays the string inside quotation
    // \n adds a new line at the end of the string
    printf("Hello, World!\n");
    return 0;
}
```

Now modify the above code to output the following in a single .c file with all the outputs:

1. Hello,
   UMaine!

2.
```
    *
   * *
  * * *
 * * * *
* * * * *
```

3.
```
* * * * *
  * * *
    *
```

4.
```
|\
|  \
|    \
|____\
```

   Hint: use \\ (double backslash) to print a \
   e.g.: printf("\\");

5. A star pattern of the Big Dipper:

```
         *     *                   *

   *                  *     *

*
```

6. Now, at the beginning of the source code, include your name and the most common error message you encounter during the development of this program. Briefly explain how you fixed it.
